- LEGEND**
- Milton Keynes Council Boundary
 - Local Planning Authority Boundary
 - Main Rivers
 - Ordinary Watercourses (Surface Level)
 - Ordinary Watercourses (Covered)
 - Drainage Board designated watercourses
 - Flood Storage Area
 - Linear Park

- Risk of Flooding from Surface Water**
- High Risk (3.3% AEP)
 - Medium Risk (1% AEP)
 - Low Risk (0.1% AEP)
 - Very Low Risk (<0.1% AEP)

- Historic Flood Records (Highways Agency)
- Historic Flood Records (Environment Agency)

Notes

This map shows the predicted likelihood of surface water flooding based on the Environment Agency's updated Flood Map for Surface Water (FMSW) data, which may be subject to further analysis in the future (www.gov.uk/environment-agency).

The Risk from Surface Water Flooding is divided into categories:

- High: each year, the chance of flooding is greater than 1 in 30 (3.3%);
- Medium: each year, the chance of flooding is between 1 in 100 (1%) and 1 in 30 (3.3%);
- Low: each year, the chance of flooding is between 1 in 1000 (0.1%) and 1 in 100 (1%);
- Very Low: each year, the chance of flooding is less than 1 in 1000 (0.1%).

The potential impact of surface water flooding can vary according to the depth of the water, and its velocity (speed and direction) as it flows.

Surface water flooding happens when rainwater does not drain away or flows over the ground instead. This type of flooding can be difficult to predict as it is hard to forecast exactly where or how much rain will fall in any storm.

This map is intended to provide a strategic overview of surface water flood risk and should not be used to assess flood risk for individual properties.
